

Anti-Virus and Anti-Spam Services

Account Services:

We offer anti-spam and anti-virus services based on the number of email user accounts per domain. Pricing is based on four tiered levels described on the following page.

All accounts include **load balancing**, 10 MB of **spooling** at no extra charge. Additional spooling capacity can be purchased for \$1 per 10 MB per month.

We also offer E-Mail Consulting services to your technical staff on an hourly or project basis.

Load balancing:

If your company uses multiple email servers, the Postini service is able to dynamically route your email around a failed server, or can be configured to distribute the load across multiple servers.

Spooling:

If your email server goes down, Postini's servers will "spool", or store, your email until your server is back up and running. Postini will automatically detect when your server is available and automatically unspool your stored mail at a controlled rate so as not to overload your server.

- **How many hours a week does spam interrupt your employees?**
- **How much space & bandwidth is spam stealing from your network?**
- **How often do viruses infect your company computers?**

How much would you save if you could block over 90% of spam?

For many companies over half the e-mail they receive is Spam. Along with Spam come Directory Harvest attacks on your e-mail servers. Postini blocks these threats and unnecessary resource-intensive operations and more. The average reduction in e-mail server connection requests (SMTP connections) is 50%, the reduction in connection traffic (bandwidth) is 90%; that combines to reclaim over 90% of your e-mail server capacity.

Postini Stats

- Postini is the only service which is WebTrust certified and SAS 70 Type II compliant, ensuring confidentiality, privacy, and availability.
- Postini utilizes a patented pass through technology that complies with HIPAA, GLBA and SOX privacy requirements. Messages are filtered in real time and never stored on disk.
- Postini's service won Best Security Product of 2004 from Information Security and has won the 'Clear Choice' award from NetWorld magazine two years in a row.

PRICING INFORMATION

There is a minimum commitment of \$20/month and an initial activation fee of \$50.

Level	Mailboxes	Monthly Price Per Mailbox	Activation Fee
1	1-20	\$4.00	\$50
2	21-50	\$3.75	\$75
3	51-100	\$3.50	\$100
4	101+	Custom Pricing, Contact Connexan	Custom

Additional Information

New user accounts can be added at any time; the fee will be pro-rated for the current term of the domain account.

Your company can assign an internal Technical Contact who will have configuration privileges in the Postini Administrative Console.

Services are contracted for a minimum 12 month term. Customers with fewer than 10 mailboxes are required to pay the 12 month term in advance.

Customers committing to a 2-year term will have the activation fee waived and will receive a 5% discount.

All accounts will auto-renew unless we receive cancellation at least 30 days prior to the end of the current term.

About Connexan

We are a business and technology solutions-oriented company with a focus on complex solutions, architecture and design. We have specialists in all aspects of modern computing from Directory Services to Networking and Network Security, Virtual Private Networks (VPNs), Storage Area Networks (SANs), and Server Virtualization and Consolidation. Also available are hosting services including e-mail, DNS, web and more. Connexan also partners with select industry leaders to seamlessly offer a complete portfolio of solutions to our customers.

Connexan's staff has tested many Anti-Virus and Anti-Spam services. Postini is the one we chose to use and offer our clients. Its track record, industry leadership, patented technology, and success in blocking our spam and viruses make it the obvious choice.

About Postini

Postini, Inc. is the industry's leading provider of email security and management solutions that protect email communications infrastructure by preventing spam and other SMTP attacks from reaching the enterprise gateway. Postini's patented managed services model utilizes exclusive preEMPT™ technology to eliminate spam and viruses, stop DoS and directory harvest attacks, safeguard content, and improve email performance.

Founded in 1999, Postini processes more than 3 billion email messages per week for more than 4,500 companies. By blocking spam, viruses and attacks before they can reach the enterprise email gateway, Postini Perimeter Manager™ assures complete email security while saving bandwidth, conserving server capacity and minimizing administrative costs.
