

Connexan GetTech™ for Connexan Virtual Desktop Solution (VDS)

The GetTech™ for VDS is an on-site services engagement in which Connexan will assist you to get up and running with VDS. You can engage Connexan at any point during your VDS deployment and we will customize the GetTech™ offering to your needs.

The basic offering includes 3 days on-site service and is designed to get you up and running, either as a proof of concept, pilot, or initial implementation. Connexan will perform a knowledge and skills transfer with up to 3 individuals on your technical staff so that they understand the implementation and can move forward with the deployment. There is an optional 2 day extension to the Connexan GetTech™ for VDS that includes the installation and configuration of a Connection Broker.

Engagement Overview

- Best Practices discussion
 - Hardware (System x or Blades)
 - Virtualization (VMware, Virtual Server)
 - Management (IBM Director, RSA, Management Modules)
- Hardware configuration
 - Update hardware to most recent, supported microlevels
 - Ensure hardware is properly configured to run VDS
